SUBJECT INDEX

Absorptivity, combustion gases 549–553
Activated sludge, hazardous wastes 411
Aerated lagoons, hazardous wastes 412
Aerosol diagnostic techniques 165–167
Air pollution devices, hazardous wastes incineration 421
Air velocities, porous inert media 128–129
Alkali-bonded deposits, coal furnaces 84–86
Amplitude growth, flow instability 437–448
Anaerobic digestion, hazardous wastes 411–412
Approximations, quasi-state 312
Ash fouling 189–200
Ash fusibility 33–37

Benchmark data
  total emissivity 549
  water vapour/carbon dioxide emissivity prediction validation 546–549
Biomass combustion 107–113
Boilers
  coal fired 189–200
  fouling 191–197
  heat transfer calculations 196–197
  slagging 191–192
Boron
  combustion 511–541
    single particles 519–525
  ignition 511–541
    delay 522–525
    enhancement 517–518
    modeling 512
    shock-tube technique 513
  oxidation mechanisms 516–517
  propellants 538
Boron monoxide polymer 530
Boron oxides
  gasification 514, 517
  layers 512, 529–530
Boron particle combustion 511–541
  characteristics 521
  chemical kinetics 514–515, 516–517
  crystalline 523–524, 526–528
  diffusion mechanism 525–530
  first-stage model 515–516, 531–535
  first-stage reaction mechanism 534, 535
  laser-ignition 518
  magnesium coating 518, 524
  model development 515–516, 531–538
  optical diagnositic system 519
  second-stage reaction mechanism 516, 535–536
  single 519–525
  types 520, 524
  X-ray diffraction patterns 533
Bubbles *see* spheres
Burners
  BERL 565–566
  bluff-body 312–314
  characteristics 132–134
  combustion research 310–315
  emissions 132, 133, 134, 135
  flat 122
  initial and boundary conditions 314–315
  modeling 136–341
  piloted jet 311–312
  porous materials 123–129, 140, 141
  reverse flow reactor 314
  temperatures graphs 141
  unpiloted jet 310–311
Burning velocity, porous inert media 130

Calcium-sulfate-bonded deposits, coal furnaces 86–88
Carbon dioxide/water vapour partial pressure ratio 567
Carbon dioxide/water vapour/nitrogen mixtures, emissivity correlation 543–574
Ceramics
  foams 123–124, 127, 128
  reticulated 126
Chlorinolysis, hazardous wastes 410
Cleaning optimization, coal fired boilers 197–198
CO emissions 123, 135
  burners 132, 134
  models 139
Coal
  ankerite/siderite 76
  calcite 76
  characterisation 63–90
  clays and shale 74
  fireside problems
    bonded deposits 51–53
    corrosion 30, 34, 42–49
    empirical approach to solutions 33–63
    fouling 31, 49–55
    heat recovery surfaces 49–55
    main problems 31–32
    mechanistic approach 63–90
    modeling 88–90
    pilot plants 58–62
    sintering tests 55–58
    slagging 31, 54, 55
    upfired furnace 60
  formation 65–67
  furnace corrosion
    chlorine 45–49
    sulfur 42–45
  kaolinite 74
  mineral content 64–67
    analysis 67–68, 69–72
  mineral matter 68
    combustion 79–80
    thermal behaviour 76–78
  minerals thermal behaviour 72–73
  pulverized 191–197
  pyrite 74–76
  quartz 73–74
  siderite/ankerite 76
Coal fired boilers
  ash fouling 189–200
  cleaning optimization 197–198
  slagging 191–192, 194–196
Coherent structures
  combustion 427–509
  turbulence 448–473
Combustion processes 513
Combustion times 522–525, 536–538
Combustors 60
  droplet parameters 163–164
Computational fluid dynamic (CFD) codes 544–545, 553
  flame modeling 545, 556, 557, 567–568
Convective fouling monitoring 196–197
Coupling procedure, radiative property models/RTE 558
Creeping flow 149–154

D^2 Evaporation Law 3, 11
Databases
  exponential wide band models 547–548

gases
k-distribution 548–549
radiative properties 546
narrow band model calculations 547
Dechlorination, hazardous wastes 410–411
Deep-well injection, hazardous wastes 412
Destruction and removal efficiency (DRE), hazardous wastes 417–419
Deterministic separated flow (DSF) models 381, 384
Detonation, hazardous wastes 408
Diagnostic techniques
gas-phase 164–165
laser 163–188
Diesel nozzle flare, droplet behaviour 213–214
Diffusion flames 473–493
jet 473–482
recirculating 482–493
Diffusion mechanism, boron particle combustion 515, 525–530
Diffusion-controlled combustion 519
Discrete particle separated flow (DPSF) models 381
Distillation, hazardous wastes 408
DPSF models *see* discrete particle separated flow (DPSF) models
Drag, spheres 156, 157
Droplet breakup 201–263
acceleration and displacement 253
aerodynamic forces 210–214, 249–250
analysis 204
basic disintegration regimes 204–210
basic parameters 205–210
combustion of pulverised fuel 258–260
description criteria 214–215
drop aggregations in shock waves 226–229
drop liquid viscosity 215–220
fragments spectra 244–245
gas flow
dynamics 202–250
mechanisms 240–243
motion 229–233
gas pressure 223–224
interaction with two-phase medium 260–262
liquid drop internal structure 220–222
liquid-liquid system 250–253, 254–255
medium composition behind droplet 243–244
overheating 225–226
pressure disturbance 260–262
rarefaction waves 245–249
Rayleigh–Lamb–Taylor's instability 209
Reynolds number 205
shock waves 225–229, 233–240
short gas-flow blast duration 222–223
theory applications 255–262
time and dynamics in shock waves 233–240
time in liquid–liquid system 254–255
types in liquid–liquid system 252–253
Weber number 205
Droplets

behaviour model 257–258
characterization 163–188
deformed 167
diagnostic techniques 165–167
distortion 175–177
fluorescence spectroscopy 164–165
gas flows 202–250
high temperature/pressure 181–183
interaction
evaporation rate 173–175
gas flow 210–214
laser diagnostics 163–188
linear optical processes 168–170
morphology dependent resonances 163–188
nonlinear optical processes 170
phase matching 170–171
porous burner 140, 141
Raman scattering 164–165, 170–171, 172, 179–181
resonant modes 168
self phase matching process 171
size determination 171–172
streams 173–175
surface tension determination 172–173
temperature determination, thermochromic additives 177–179
viscosity determination 172–173
DSF models *see* deterministic separated flows

Emissivity, gases 546
Emissivity correlations
accuracy 553–557
atmospheric pressure test 555–556
benchmark data 549
calculations 549
combustion gases prediction 549–553
effective linear absorption coefficient 556
elevated pressure test 556
EWBM comparison 557
H_2O–CO_2–N_2 mixtures 543–574
hybrid models 551–553
model accuracy 549
prediction 546–553
RTE 557–564
Engines, droplet parameters 163–164
Enthalpy excess 129–131
Eulerian models, particle dispersion 371, 372–376
Evaporation rate, interacting droplets 173–175
Exponential wide band model (EWBM) 547–548, 557
Extinction coefficient, reticulated ceramics 126

Finite amplitude growth, flow instability 437–448
First-stage combustion
boron particle model 515–516, 531–535
times table 537
zones 522
First-stage reaction mechanism, boron particle model 516, 517, 534, 535

Gray calculations 559
parameters 564
Spheres 147–162
drag 156, 157
resonant modes 167–168
viscous/conducting 149–152
Spheroids 153–154
Sprays *see* streams
SSF models *see* stochastic separated flow
Standard emissivity of gases, definition 546
Steam generators
anti-fouling design 51, 55
surface fouling 49–55
Steam raising fuels 29–120
Steam stripping, hazardous wastes 408–409
Stochastic separated flow (SSF) models
see also Monte Carlo models
particle dispersion 382, 393–395
Streams, droplet evaporation rate 173–175
Supercritical droplet vaporisation 2–26
Surface tension, droplets 172–173

Thermal conductivity, porous inert media 124–125
Thermochromic additives, droplet temperature determination 177–179
Three-dimensional instability, turbulence 451–457
Total emissivity *see* emissivity
Total transmittance non-homogenous (TTNH) model 560–562, 568–570
Transient hydrodynamic force equation, particles 153, 156
Transient momentum
empirical equations 152–153
energy equations 147–162
historical background 147–148
Trickling filters, waste 412
Turbulence
assumptions 367–368
coherent structures 448–473
eddy-particle interaction 368–371
ideas and terminology 366
length and time scales 368
mixing transition 457–470
modeling 367, 470–473
separation of scales 448–451
three-dimensional instability 451–457
transport processes 367
Turbulent particle dispersion 363–396
anisotropic flow 374–375
Eulerian models 371, 372–376
j–ϵ model 372
Lagrangian models 376–391
locally homogeneous flow model 373
Markov process 377
models 371–395
nondiscrete dispersive approach 373, 374–375
particle diffusivity calculation 373
pulverised-coal flames 391–395
two-fluid model 373
Two-stage porous burners 136

Viscosity
  coal ash and slags 37–42
  conducting sphere equations 149–152
  droplets 172–173
  equations 38–39
  flow instability 430
Volatile organic compounds (VOCs)
  destruction 122
  reactors 127
Vortex motion 428–429, 501

Waste, *see also* hazardous waste
Waste Reduction Innovative Technology program (WRITE) 414
Water vapour/carbon dioxide
  nitrogen mixtures emissivity correlation 543–574
  partial pressure ratio 567
Weighted sum of gray gases model (WSGGM) 551
Wet oxidation, hazardous wastes 409–410
Wet-bulb temperature 3, 14, 22–23
Wide band models, databases 547–548
Wood combustion 107

X-ray diffraction (XRD) patterns, boron particles 525, 529, 532, 533

• BACK ISSUES OF • THIS JOURNAL

Back issues of this and all other Elsevier Science journals are available in hard copy. New subscribers to a journal may purchase back issues of that publication in hard copy edition at 25% discount off the standard price. Elsevier Science maintains stocks of back issues and orders may be placed with confidence at your nearest Elsevier Science office. Should any issue of a volume be temporarily out of stock at the time of ordering, a high quality photoduplicated copy will be supplied at no extra charge to complete your order.

SAVE UP TO 25% BY PURCHASING COMPLETE SETS
Customers wishing to purchase complete sets can do so at a saving of 25% off the individual volume price.

MICROFORM EDITIONS
Back issues in microform of Elsevier Science research journals are also available. For further information please apply to your nearest Elsevier Science office.

BACK ISSUES PRICE LIST
Full details of the rates of back issues of all Elsevier Science journals can be found in our Back Issues Price List. Please contact your nearest Elsevier Science office for a copy.
